

Project H View - SecurityFACT By Jason Kang

Source:

<https://github.com/KangDroid/HexView>

Features:

1. View input file as hex view.
2. Dump hex file to plain text
3. Enabling input/output FILE location customization
4. Find file extension based on "file path & name"

Screenshots(Main Menu):

```
1. Enter input file location(path).
2. Enter output file location(path).
3. View hex file in terminal.
4. Dump hex file to output file location.
5. Find file default extension
6. EXIT
```

```
Current input info: NOT SET
Current output info: NOT SET
```

```
Enter menu you want to use: █
```

TODO

1. File extension Improvements: Using File signature & file structure
2. Print each address when viewing the file.
